Dear Mallie:

Thank you for choosing UL Environment and its ISO 17025 accredited testing laboratories for your analytical needs. Attached is the final report, which presents the test protocols and resulting data.

We appreciate this opportunity to assist you. If you have any questions or wish to discuss your results, please feel free to contact us at (888) 485-4733.

Sincerely,

A handwritten signature in black ink that reads "W. Elliott Horner".

Attachment: Report: 18177-02

PROJECT SUMMARY

UL Environment is pleased to present the test results for the air cleaner identified as “SN00026, Aviation Component” model, as submitted by Aviation Clean Air. The requested test protocol for this project was to determine compliance with the UL 867 Ozone test method/requirements.

UL Environment did not select the samples, determine whether the samples were representative of production samples, witness the production of the test samples, nor were we provided with information relative to the formulation or identification of component materials used in the test samples. The test results apply only to the actual samples tested.

The issuance of this report in no way implies Listing, Classification or Recognition by UL LLC and does not authorize the use of UL Listing, Classification or Recognition Marks or any other reference to UL LLC on the product or system. UL Environment authorizes the above named company to reproduce this Report provided it is reproduced in its entirety. The name, Brand or Marks of UL LLC cannot be used in any packaging, advertising, promotion or marketing relating to the data in this report, without UL's prior written permission.

UL Environment, its employees, and agents shall not be responsible to anyone for the use or nonuse of the information contained in this report, and shall not incur any obligation or liability for damages, including consequential damages, arising out of or in connection with the use of, or inability to use, the information contained in this report.

In no event shall UL be responsible to anyone for whatever use or nonuse that is made of the information contained in this report and in no event shall UL, its employees or its agents, incur any obligation or liability for damages, including, but not limited to, consequential damages arising out of or in connection with the use, or inability to use, of the information contained in this report.

This report and the accompanying report 18177-01 will serve that all tests on the subject products have been completed. This concludes all work associated with Project 18177 and we are therefore closing this project.

ENVIRONMENTAL CHAMBER TEST REPORT FOR OZONE EMISSIONS TESTING

Maximum Measured Ozone Emission Concentration (ppm)	Maximum Allowed Ozone Concentration per UL 867 (ppm)
0.028 (0.026 rolling avg)	0.050

Customer: Aviation Clean Air

Sample Identification: 18177-021AA

Product Description: AIR CLEANER; SN00026, Aviation Component

Product Loading: 1 unit / 31.1 m³

Test Conditions: 1.30 ± 0.05 ACH
50% RH ± 5% RH
25°C ± 2°C

Test Period: 07/08/15

Test Description: The product was received by UL Environment on 06/29/15 as packaged and shipped by the customer. The package was visually inspected and stored in a controlled environment. The product was then loaded into the chamber and monitored for ozone emissions over an 8-hour period.

Ozone analysis conducted using a TEI Model 49i UV-absorbance based analyzer with a detection limit of 0.5 ppb (0.0005 ppm).
